

Expo Foam Coating Products Condensed Catalog

Probond Dry Adhesive Primer:

Designed primarily for use in such applications as priming, adhering and finish coating foam shapes used in architectural exterior decorative trim (i.e., pop-outs, plant-ons, cornices, reveals, etc.).

Probond T-9:

Formulated with very fine silica sand and state-of-the-art redispersible copolymers to provide excellent workability and tenacious bond.

Probond II Supercoat:

A premium quality product designed for priming, adhering and finish-coating foam shapes used in architectural exterior decorative trim (i.e., pop-outs, plant-ons, cornices, reveals, etc.).

Supercoat T-2:

Superior quality at an economical price. T-2 is formulated with #20 silica sand and state-of-the-art polymer technology to provide great adhesion and excellent workability.

Supercoat T-3:

Superior quality at an economical price. T-3 is formulated with #30 silica sand and state-of-the-art polymer technology to provide great adhesion and excellent workability.

Supercoat T-20 & T-30:

Supercoat T-20 & T-30 are premium quality, polymer enriched, Portland cement formulations for EPS foam shape application. Designed primarily for use in such application as priming, adhering and finish-coating architectural foam shapes, where only a maximum strength product is acceptable. T-20 is formulated with #20 silica sand. T-30 is formulated with #30 silica sand.
