

# Expo Light Reflectance Values for Classic and Milano Colors

## GENERAL INFORMATION:

Reflectance is the amount of light that a surface reflects compared to the amount of light that falls on that surface. The reflectance value of an individual color indicates the amount of light and heat that specific color will reflect. Black has a reflectance value of zero and absorbs all light and heat. Surfaces low in reflectance value are generally very dark and can get exceptionally hot. On the other hand, white has a reflectance value of virtually 100 and keeps a building light and cool. All colors fit between these two extremes.

CLASSIC			MILANO		
COLOR		LRV	COLOR		LRV
1	Crystal White	77.37	224	Benavento	27.13
29	Sunrise	59.31	225	Sorrento	36.80
